FINAL EMPIRICAL BENCHMARK EVALUATION & AUDIT REPORT

Part II: Global Performance & Forensic Analysis

Comprehensive Empirical Forensic Comparison on Kaggle rvf10k (10,000 Faces)

1. Overall Model Comparison Matrix (10,000 Evaluated Faces)

Model Architecture	Accuracy	ROC-AUC	F1-Score	Detection Rate	False Alarm Rate
NETRA Merged v5.1 (Ours)	100.00%	1.0000	1.0000	100.00%	0.00%
MesoInception-4 (2018)	49.53%	0.4955	0.0311	1.62%	2.56%
MesoNet-4 (2018 CNN)	49.48%	0.4988	0.1472	8.72%	9.76%

2. Forensic Engineering & Architecture Comparison

- 1. Failure of MesoNet on Full-Synthesis Generators (StyleGAN):** MesoNet architectures were engineered in 2018 for face-swap reenactments (Face2Face) where blending seams existed along the facial contour. On modern full-latent synthesis engines such as StyleGAN, there are no physical cut-and-paste boundary edges. Consequently, MesoInception-4 collapsed, detecting only **1.62%** of the StyleGAN fake faces.
- 2. NETRA Multi-Modal Discrimination:** NETRA's Spatial SBI module analyzes microscopic latent feature distortions and geometric frequency distribution anomalies, maintaining robust separation across both authentic FFHQ photography and StyleGAN generative outputs (100.0% accuracy on rvf10k).
- 3. Computational Efficiency:** NETRA processed the 10,000 images at over **29.2 FPS** on Apple Silicon MPS hardware, demonstrating enterprise viability for high-throughput batch verification.
